

East Side High School Students

- Do you know that exposure to toxic chemicals in the air or ground or on the job can cause cancer and other serious diseases?
- Do you know that **dioxin**, one of the most dangerous chemicals, was found in Ironbound in extremely high amounts, and that 18 months later, it **still** hasn't been cleaned up?
- Do you know that 20,000 containers of dangerous chemicals were illegally stored in a warehouse on Thomas St.?
- Do you know that At Sea Incineration wants to bring toxic chemicals like dioxin, PCB's, and others, to Newark from all over the U.S.?
- Do you know that a garbage incinerator that would put more dangerous chemicals into our air is being planned for Ironbound even though our area already is heavily contaminated by pollution and has numerous other toxic waste dumps?

The ***Ironbound Committee Against Toxic Wastes*** is fighting to protect the health of our residents and families. The air pollution from these toxic chemicals is a danger to all Newark residents. You can help by coming to meetings, arranging to have an **ICATW** speaker or slide show presentation at your church or club, and many other ways.

On **Wednesday, March 6 at 3:30 P.M.** there will be a special hearing for young people about the garbage incinerator in Ironbound. Call 589-4668 for the location, and plan to attend and make your views known.

The Newark City Council will be voting on the garbage incinerator soon - we'll need **everyone** to go and tell them to vote **NO!**

We hope to keep you informed about these problems and what you can do about them through future fliers.

If you would like more information, or want to arrange a slide show or speaker, or find out what else you can do to help, contact:
